

PRISM Benchmark Summary

Generated 2026-08-19 12:01 UTC · Prompt Reliability through Intelligent Semantic Multiplexing

Llama-3.2 (3B)

Model tag: llama3.2:3b · Last run: 2026-08-19 11:34:06 UTC · Run ID: a387a2e6a73f422a8a26b7053f704153

Questions run	400
Accuracy	26.6%
Agreement (P0–P4)	38.0%
Instruction compliance	37.4%
Invariant-incorrect	7.2%

PRISM measures answer stability across five semantically equivalent prompts in addition to accuracy — a model can be highly consistent while being consistently wrong, so these numbers should be read together, not collapsed into a single score.

Results by dataset

	Questions	Accuracy	Cond. accuracy	Agreement	Prompt sensitivity	Instr. compliance	Recovery rate	Unanimous rate	Invariant-
enge	200	53.2%	65.0%	76.0%	24.0%	74.8%	81.9%	58.0%	14.5%
	200	0.0%	0.0%	0.0%	100.0%	0.0%	0.0%	0.0%	0.0%

Results by prompt condition (P0–P4)

Dataset	Prompt	Accuracy	Instruction Compliant Rate
arc_challenge	P0	53.0%	82.5%
arc_challenge	P1	53.5%	82.5%
arc_challenge	P2	51.0%	74.0%
arc_challenge	P3	53.5%	79.5%
arc_challenge	P4	55.0%	55.5%
sciq	P0	0.0%	0.0%
sciq	P1	0.0%	0.0%
sciq	P2	0.0%	0.0%
sciq	P3	0.0%	0.0%
sciq	P4	0.0%	0.0%

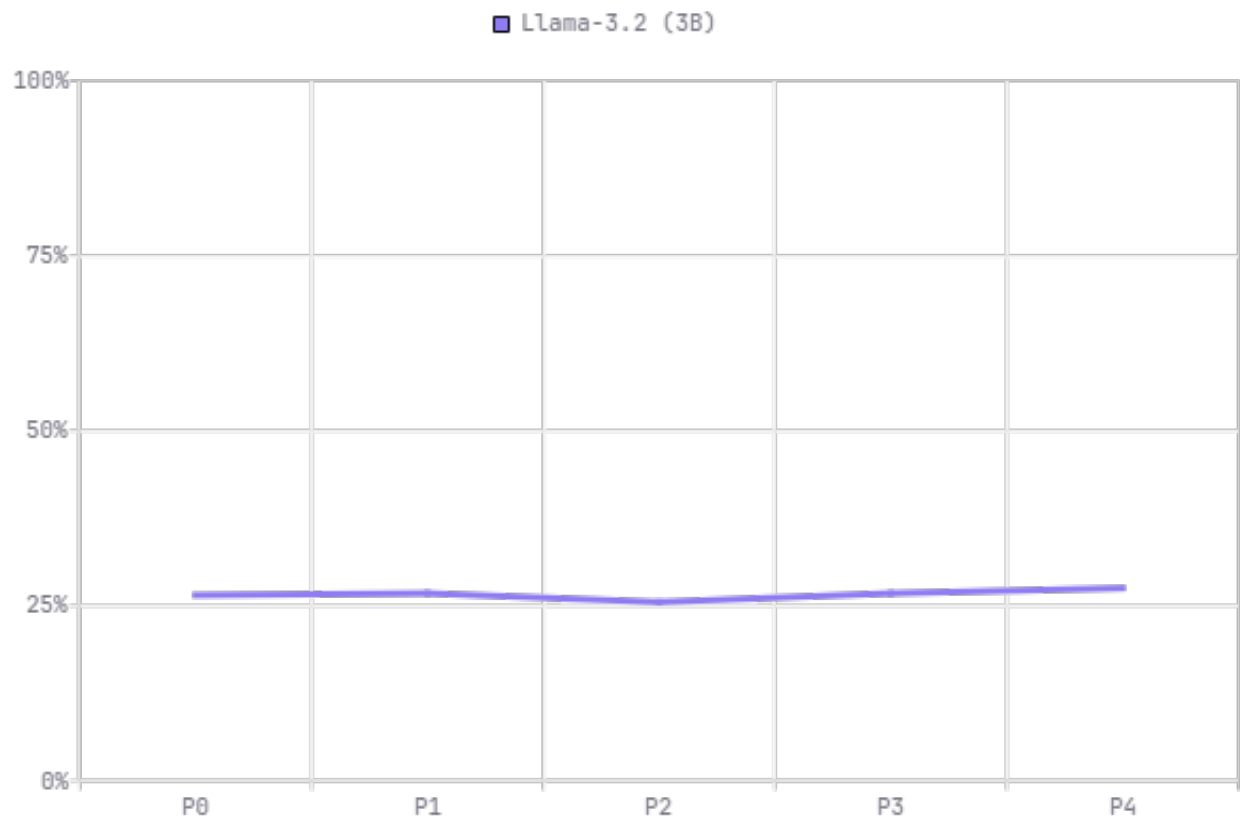

Dashboard charts

Metrics by dataset

Accuracy by prompt condition

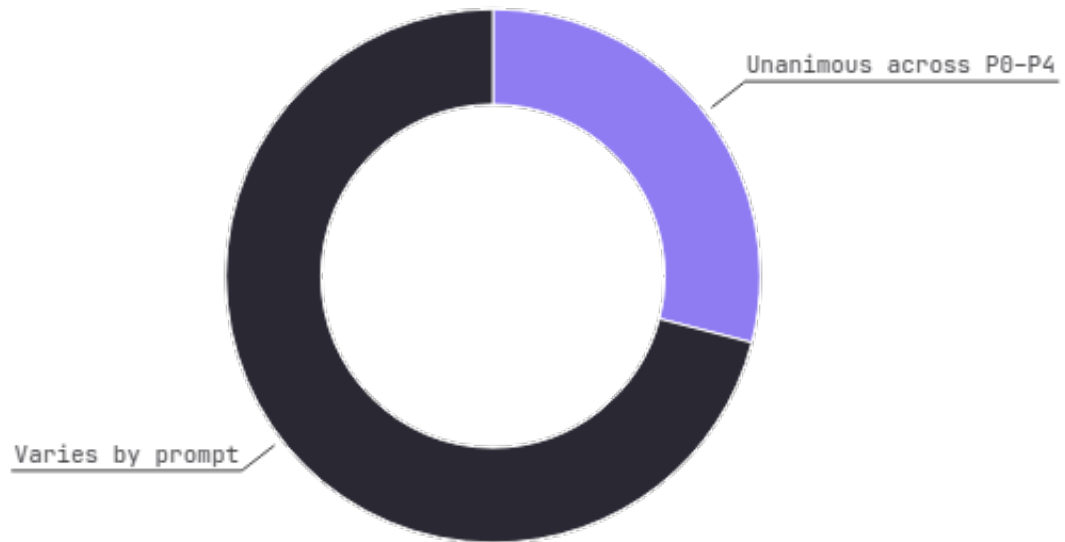

Accuracy by prompt condition (P0-P4), averaged over datasets

Answer consistency

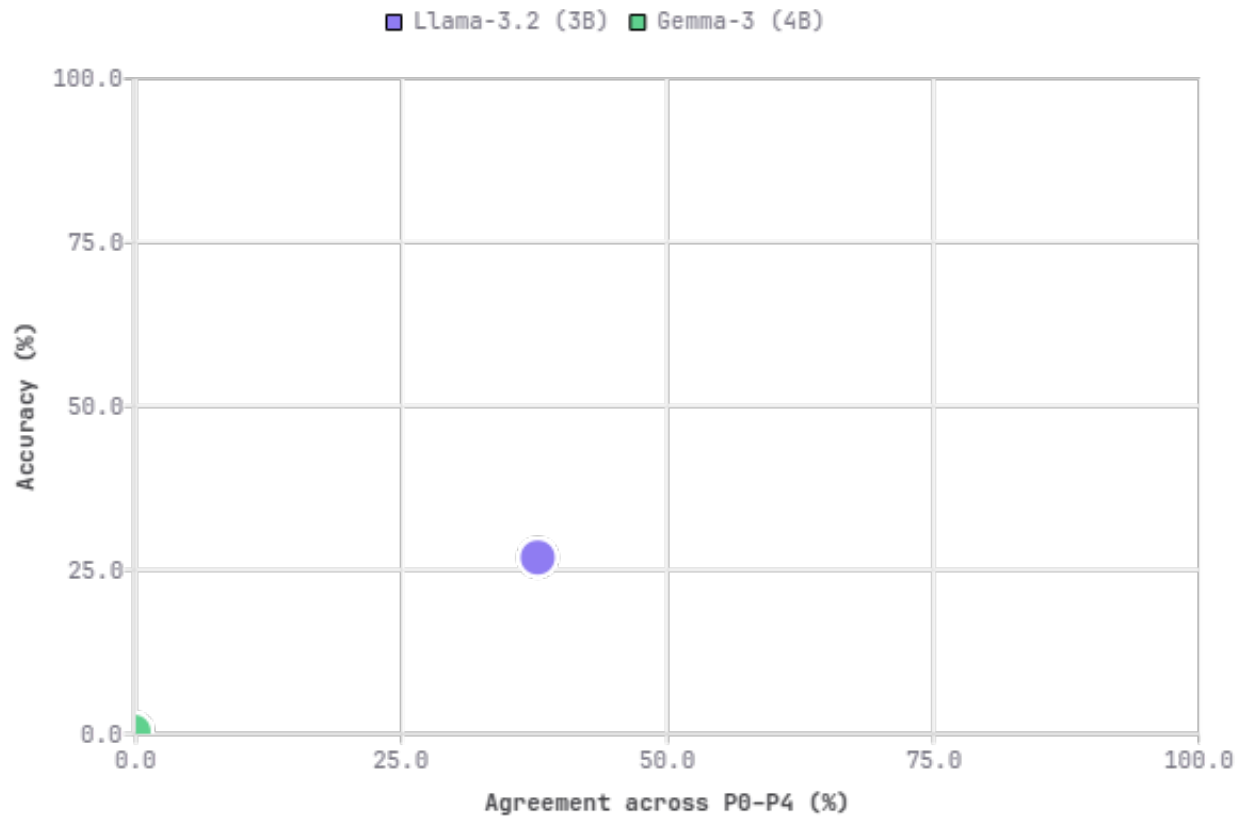

Llama-3.2 (3B) – unanimous vs. varying answers across prompts

■ Unanimous across P0-P4 ■ Varies by prompt

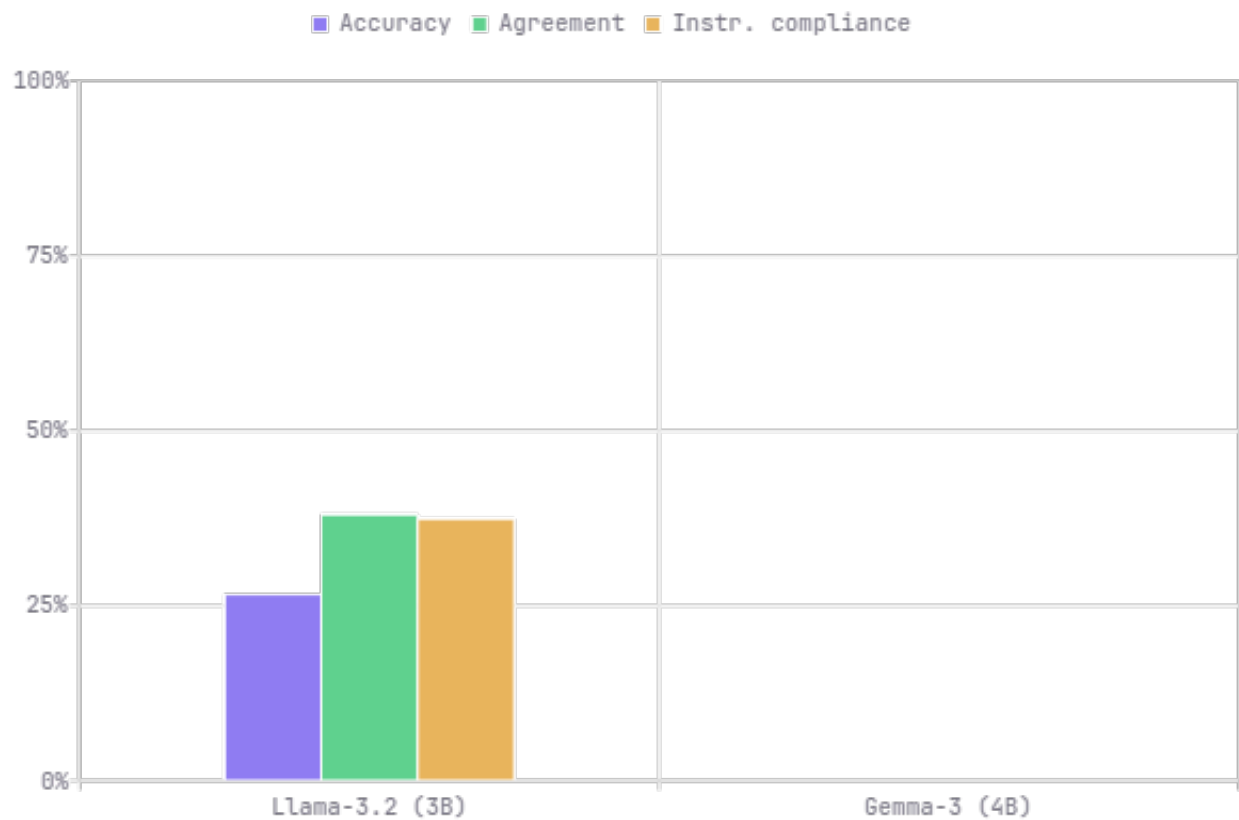

Accuracy vs. agreement (all models)
